SUMMARY

PhD-trained HEOR/RWE and decision analytics professional with 6+ years of experience translating complex life sciences, market access, and policy questions into rigorous analyses, value evidence, and client-ready deliverables. Skilled in economic modeling, real-world data analytics, evidence synthesis, and strategic communication to support product value, reimbursement, market access, and business decisions across the life sciences product lifecycle.

KEY ACHIEVEMENTS

- Managed concurrent HEOR/RWE workstreams across 3+ therapeutic areas, spanning economic modeling, real-world data analytics, evidence synthesis, technical documentation, and stakeholder-ready communication.
- Generated U.S. and ex-U.S. value evidence across 5 markets, supporting product value story, HTA strategy, reimbursement planning, dossier development, and payer-facing communication.
- Built decision models for 2 MASH therapies and evaluated 7 atrial fibrillation screening strategies, linking clinical evidence to payer value, adoption implications, downstream utilization, and access strategy.
- Analyzed 30M+ Medicaid claims across 1.2M beneficiaries, generating RWE on treatment patterns, healthcare utilization, outcomes, and access gaps.

PROFESSIONAL EXPERIENCE

Health Technology Assessment (HTA) Postdoctoral Research Fellow

Massachusetts General Hospital and Harvard Medical School - Boston, MA

Aug 2024 - Present

- Led concurrent HEOR/RWE and market access evidence workstreams, converting ambiguous clinical, access, and business questions into model designs, evidence plans, and client-ready deliverables.
- Developed U.S. and ex-U.S. value evidence for Rezdiffra/resmetirom across 5 markets, supporting HTA strategy, reimbursement planning, dossier development, and product value communication.
- Modeled resmetirom's system-level impact on MASH liver transplant demand, waitlist mortality, and transplant system capacity through 2060, quantifying downstream health-system value beyond liver-specific outcomes.
- Delivered cost-effectiveness, budget impact, and value-based pricing analyses for Wegovy/semaglutide 2.4 mg in MASH, clarifying how pricing and adoption scenarios affect payer value, affordability, and access strategy.
- Evaluated 7 atrial fibrillation precision screening strategies, demonstrating how AI-enabled and wearable-based approaches can support earlier detection, reduce severe complications, and avoid unnecessary downstream utilization.
- Conducted literature reviews, evidence syntheses, and meta-analyses to strengthen model inputs and lead technical documentation, 5 congress materials, 4 manuscripts, and stakeholder-facing narratives.

Graduate Research Assistant

Georgia Institute of Technology - Atlanta, GA

Jan 2020 - Aug 2024

- Led end-to-end claims-based RWE study using 30M+ Medicaid claims across 1.2M beneficiaries, generating evidence on treatment patterns, healthcare utilization, outcomes, and access gaps.
- Built reusable claims-data infrastructure from fragmented Medicaid files, improving analytic reproducibility and accelerating delivery across multiple RWE and evidence-generation studies.
- Designed matched cohort and claims-based analyses to compare clinical and utilization outcomes across patient populations, supporting robust real-world evidence generation.
- Developed decision models comparing 12 COVID-19 vaccine strategies, identifying how efficacy, rollout speed, cost, and variant dynamics shifted preferred policy and resource-allocation decisions.
- Translated complex claims and modeling analyses into 3 peer-reviewed publications, 6 conference presentations, and decision-ready evidence for scientific, policy, and stakeholder audiences while mentoring 8 graduate researchers.
- Designed a game-theoretic economic model evaluating how federal and state cost-sharing policies influence private stakeholder profitability in public-serving programs; validated findings against 3 real-world case scenarios.

ORISE Data Science Fellow

Centers for Disease Control and Prevention (CDC) - Atlanta, GA

Jul 2022 - Jul 2023

- Evaluated U.S. transportation mask policies across 11 variant-specific months, quantifying health and economic tradeoffs to support policy and operational decision-making.
- Integrated 3 transportation and border-entry databases to model Ebola importation risk, supporting risk-based surveillance strategy and resource allocation decisions.
- Built an interactive ZIP-code-level surveillance dashboard covering 41,500+ U.S. ZIP codes, translating complex data into actionable insights for localized planning and stakeholder communication.

Operations Research Engineering Intern

UPS - Atlanta, GA

May 2019 - Jan 2020

- Developed a discrete-time mixed-integer optimization model to improve parcel-carrier staging and positioning within a distribution center.
- Designed greedy heuristics using last-mile delivery data, improving on-time delivery performance by 10%.

Supply Chain Summer Intern

Coca-Cola Company - Atlanta, GA

May 2018 - Aug 2018

- Built a machine-learning model for inventory forecasting to support proactive shortage mitigation and demand planning.

SKILLS

HEOR / Market Access: HEOR Strategy, Market Access Evidence, Payer/HTA Communication, Value Communication, Burden of Illness, Comparative Effectiveness, Reimbursement Evidence, Dossier Support

RWE / Study Methods: Real-World Evidence, Observational Studies, Claims Analysis, Matched Cohort Analysis, Evidence Synthesis, Systematic Literature Reviews, Meta-Analyses, Study Protocols, Analysis Plans

Modeling & Analytics: Cost-Effectiveness Analysis, Budget Impact Analysis, Microsimulation, Markov Models, Discrete-Event Simulation, Forecasting, Scenario & Sensitivity Analysis, Predictive Analytics, Machine Learning, Optimization, Game Theory

Data & Tools: Administrative Claims, EMR/EHR, Clinical Trial Data, Patient-Level Registry Data, Published Literature; Python, R, R Shiny, SQL, C++, Excel, PowerPoint, Power BI

EDUCATION

Harvard Medical School – Boston, MA

Present

Postdoctoral Research Fellow, MGB Center for Health Technology Assessment

Georgia Institute of Technology – Atlanta, GA

2024

PhD, Industrial Engineering (Minor: Machine Learning)

Georgia Institute of Technology – Atlanta, GA

2022

MS, Operations Research

Georgia Institute of Technology – Atlanta, GA

2018

BS, Industrial and Systems Engineering (Minor: Mathematics)

SELECTED SCIENTIFIC PRESENTATIONS & PUBLICATIONS

- Poster Presentation, Cost-effectiveness of precision screening for atrial fibrillation: a decision-analytic model. ISPOR 2026.
- Poster Presentation, Impact of Resmetirom on Liver Transplant Demand and Outcomes in MASH Patients in Germany: A Microsimulation Approach. MASH-TAG 2026.
- Poster Presentation, Impact of Resmetirom on Liver Transplant Demand and Outcomes in U.S. Patients with MASH. ISPOR Europe 2025.
- Poster Presentation, Comparative Effectiveness of Atrial Fibrillation Screening Guided by Age Versus Estimated Risk: A Decision Analytic Model. ESC Congress 2025.
